

Amicus Therapeutics

Office Fit-Out / Lab

Location

Cranbury, New Jersey

Client

Amicus Therapeutics

Market Sector

Science & Technology

Size

160,000 sf

The Opportunity

PS&S was offered the opportunity to renovate an existing 160,000 sf building to house offices and state-of-art laboratories for a growing start-up biotech company.

The Challenges

Maximizing the performance of the design with collaborative office layouts and efficient laboratories at a minimum cost.

The Solution

PS&S worked closely with the Amicus team to take maximum advantage of existing laboratory and vivarium space to provide an innovative lab environment for the development of their new products. Existing casework, fume hoods and utilities were re-used wherever possible. The unused vivarium became a space resource for additional lab support functions.

On the office side, collaborative space planning strategies were used to develop interactive layouts that foster company communications across departmental boundaries. Open space planning and glass-fronted offices were used to provide natural daylight throughout the plans. A new cafeteria, game room and fitness space all provide additional opportunities for informal interaction between staff.

PS&S worked closely with Amicus' designated program manager to deliver this project on time and on budget.
