Martins Creek Nomad Compressor Station

Location

Lower Saucon Twp,
Northampton County, PA

Client

Adelphia Gateway

Client Type

Transmission

Size

½ mile of 16"

With decades of experience, PS&S delivers innovative solutions to your energy infrastructure needs throughout your service territories. Our strong multidisciplinary team provides our clients with a full suite of services from inception including desktop and feasibility analysis to field services, detailed engineering and permitting, through bidding and construction support. PS&S personnel understand the issues affecting projects and can readily provide you with a specific solution to each challenge. PS&S is the single source for the latest in Energy project solutions.

PS&S provided design services for the greenfield Martins Creek Compressor Station which was comprised of a tie-in to the existing Martins Creek M&R Station, two trailer mounted Nomad compressors, remote operated valving and a backup generator. The station was designed to provide last-mile delivery compressor to ensure proper operating pressures for a power generation facility at the terminus of the pipeline system. Design services included survey, and design/drafting of site/civil, Mechanical including piping, and integration of third party equipment such as trailer mounted compressors; Electrical including site power, Instrumentation and Controls including coordination with 3rd party vendors for integration of an RTU and control for fully remote operations.
